June 30, 1998

Olson Research is a consulting and educational firm specializing in services for depository financial institutions. The firm provides a variety of products and services ranging from computer models and reporting services, to consulting and educational programs.

For over 25 years, Olson Research has been recognized as the industry leader in innovative modeling for asset/liability management. Our proactive involvement with both bankers and regulators has given us the tools to produce superior solutions for financial risk management.

Please contact us: 10290 Old Columbia Road, Columbia, MD 21046
Phone: 410-290-6999, Fax: 410-290-6726, Email: info@olsonresearch.com

INTRODUCTION

The Risk Measurement Digest for Banks provides quantitative data for use in assessing bank risk positions and serves as a tool for constructing and administering risk management policies. The digest is the product of collecting information from a sample of banks and processing each bank's database by means of the Olson Research A/L BENCHMARKS Model.

Risk is the possibility of injury or loss. Measurements of financial risk provide information about the possibility of loss in the future. Three major financial risks in a bank are interest rate risk, liquidity risk, and asset quality risk. The measurements of financial risk in the digest are those which are commonly defined and regularly used by bankers, financial analysts, and regulators.

How much risk is too much? The evaluation of financial risk in a bank requires two things. First, each measured financial risk should be judged within a perspective of financial return and capital adequacy. Second, each measured financial risk should be judged within a perspective of peer bank benchmarks which reflect the collective decision-making of a large number of banking professionals facing common circumstances. The Risk Measurement Digest for Banks presents both.

Financial and statistical measures are presented in the following categories:

Interest Rate Risk	Capital Adequacy
Liquidity Risk	Earnings Performance
Asset Quality Risk	Balance Sheet Mix

The digest is divided into three sections: highlights, glossary of terms, and detail bank information. The highlights section presents the high, low, median, mean and standard deviation of a few selected measures in the above six categories. The glossary of terms explains the measures presented in the digest. The detail bank information section presents a more comprehensive set of measures summarized by group and individually listed by bank.

This digest was compiled using bank data as of June 30, 1998.

The sample includes 555 commercial banks. The smallest bank in the sample had total assets between \$5 million and \$10 million. The largest bank in the sample had total assets between \$30 billion and \$35 billion. To summarize the results, the banks were classified into one of three groups:

Group A	Under \$100 Million Total Assets	236 Banks
Group B	\$100 - \$300 Million Total Assets	218 Banks
Group C	Over \$300 Million Total Assets	101 Banks

THE DATA

The primary source of data is the FDIC Call Report or the Federal Reserve FRY-9 Report. The financial performance measures are based upon an automated analysis of each bank's data. Assumptions are based upon historical bank data, industry norms when relevant data is missing, and supplemental information provided by bank management.

The financial performance measures are primarily percentage ratios. These measures represent balance sheet relationships; income and expense relationships; yields and cost ratios; and rates of return. Additional measures of change such as duration, growth rates, and simulation shock results are also included. Ratio calculations are based upon annualized income and expense, taxable equivalent income, and average balances. Mix percentages to total assets are based on end of period balances.

The individual bank data has been processed separately and not consolidated. The structure and interrelationships of each bank's data has been reported, but neither the identity nor the actual financial data of individual banks is disclosed. The financial measures are reported separately for each entity and statistical measures of dispersion and central tendency are presented for three size group classifications.

The statistical measures of dispersion and central tendency (high, median, low, mean, and standard deviation) give information about differences and similarities. The median is the center-most observation of all the data points; the mean is the sum of all the data points divided by the number of data points; and the standard deviation is the statistical measure of variability about the mean.

It has been assumed that the measured characteristics represent a normal distribution. Therefore, it is assumed that 67% of the data observations represent one standard deviation above and below the mean and that 95% of the data observations represent two standard deviations above and below the mean.

If an individual bank's measured characteristic falls more than two standard deviations away from the mean in either direction, the bank is an "outlier". If the bank is an outlier on the harmful side of the mean, a substantial risk position exists and should be treated as a situation requiring managerial attention.

Observing peer group averages is a natural curiosity and a defined need in banking for purposes of judging individual measures of performance. However, few, if any, banks will perform at the average in every category of risk, return, and capital adequacy.

Comparing your bank to measures of central tendency is useful. But, the best analysis demonstrates how a measure of financial performance relates to a comprehensive picture of risk, return, and capital within the same entity. This digest provides financial performance measures of a large number of individual banks which can serve as illustrations of good or bad standards of performance.

Interest Rate Risk Peer Statistics Summary	11

Interest Rate Risk

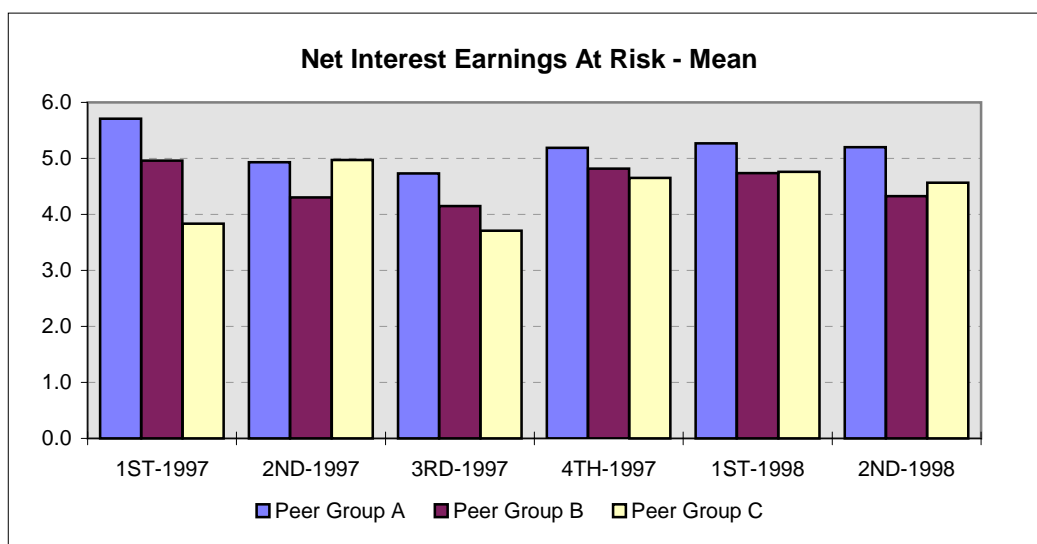

Net Interest Earnings at Risk

Net Interest Earnings at Risk is the potential adverse change in net interest income arising from a change in interest rates, measured over a one-year forecast horizon. For the Risk Measurement Digest for Banks, the base net interest income is computed using a current or constant forecast of statement of condition balances, market interest rates, and noninterest items. The potential adverse net interest income is calculated by using a +/-200 basis point change in interest rates; assuming a parallel shift in the treasury yield curve; and simulating changes in repricing, prepayments and other rate-driven parameters which impact cash flows.

Interest Rate Risk

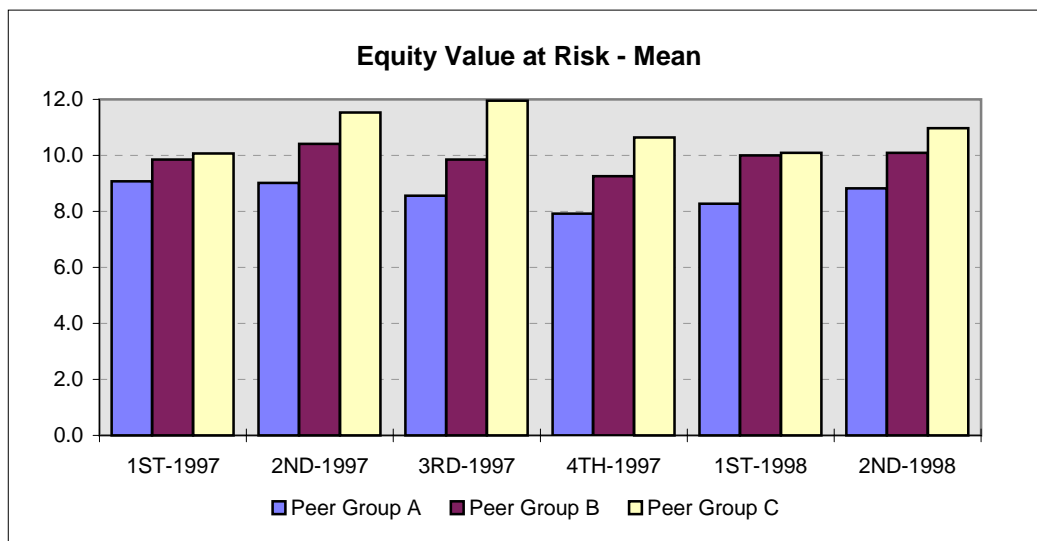

Equity Value at Risk

Equity Value at Risk is potential adverse change in the economic value of equity (EVE) arising from an assumed change in interest rates. A/L BENCHMARKS determines the base EVE by subtracting the market value of total liabilities from the market value of total assets. Market values for assets and liabilities are either current quoted market prices or discounted cash flows using current market rates. The potential adverse impact on EVE is calculated by using a +/-200 basis point change in interest rates; assuming a parallel shift in the treasury yield curve; and simulating changes in repricing, prepayments and other rate-driven parameters which effect the level and timing of cash flows.

Interest Rate Risk

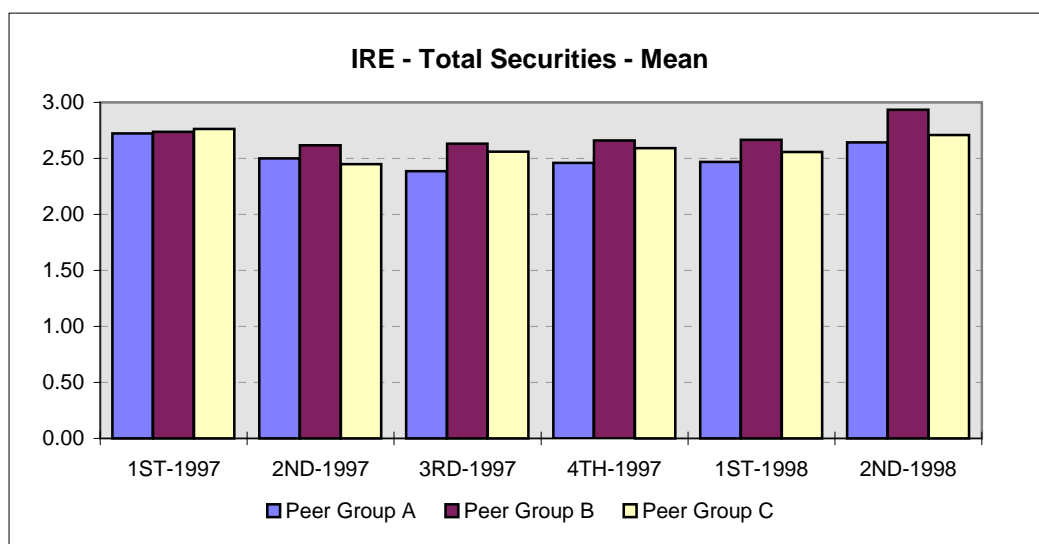

Interest Rate Elasticity (IRE) - Total Securities

IRE is a measure of interest rate sensitivity. It is the percentage change in the present value (market value) of a financial instrument or portfolio which is anticipated to occur if market yields increase 100 basis points. IRE is the sum of modified duration and convexity. Modified duration is the mathematical first derivative of the bond price/yield equation. Convexity is the second derivative. Because convexity is relatively small in many cases, IRE can be used to estimate modified duration. IRE can be used to estimate Macaulay's duration. Macaulay's duration is the present value weighted average time until all the cash flows from a financial instrument or portfolio will be received or repriced to current market rates. As a measure of Macaulay's duration, the IRE percentage is used to express the number of years to receive or reprice cash flows.

Allowance for Loan Loss to Total Loans

Allowance for Loan Losses is a valuation reserve to provide for possible losses on loans. The reserve is a contra-asset which is subtracted from total loans to determine the net carrying value of loans for a bank's statement of condition. Also referred to as reserve for loan & lease loss.

FDIC Examination Screening Information

Level One Objective Screening

In June 1996, the OCC, the FRB and the FDIC issued the Joint Agency Policy Statement on Interest Rate Risk. To implement the Policy Statement, in November 1996, the Division of Supervision of the FDIC published its new approach for IRR examinations in its Manual of Examination Policies. During 1997, FDIC field examiners began the implementation of the FDIC's new approach.

The FDIC examination procedures follow a multi-level framework. The procedures guide examiners towards a qualitative interest rates assessment, rather than a uniform supervisory measurement. The four-level approach is designed to help the FDIC effectively allocate examination resources by limiting detailed scrutiny of banks with low interest rate risk profiles. Here is a summary of the examination procedures for each level:

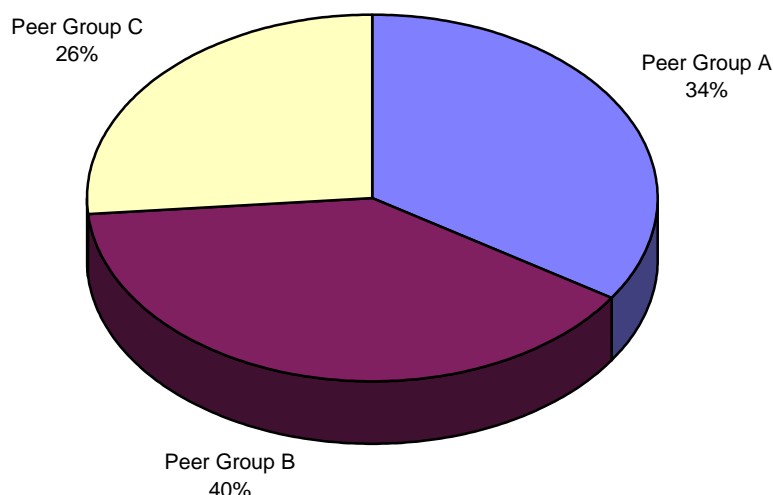

- **Level One** - Applies to all banks and identifies those with minimal IRR, strong financial condition, and satisfactory management. Level One uses objective criteria for off-site assessment.
- **Level Two** - Applies to banks that do not meet certain Level One criteria, especially the Level One objective assessment criteria.
- **Level Three** - Applies to banks that exhibit significant IRR or unsatisfactory IRR management.
- **Level Four** - Applies to banks that exhibit significant IRR or unsatisfactory IRR management, and that do not use a reliable measurement system.

A complete discussion of the new FDIC Examination procedures can be found in the Manual of Examination Policies from the Division of Supervision of the FDIC. This document is accessible on the Internet (<http://www.fdic.gov/banknews/manuals/exampoli/>).

Breakdown of banks which failed FDIC Level One objective screening for Interest Rate Risk.

	2ND-1998	% of Banks in Violation	% of Banks in Peer Group
